

Flaxseed Oil Waste

A commercial manufacturer of flaxseed oil was having a problem obtaining the FOG and TSS level required by their local POTW. A sample was submitted to our laboratories for treatment analysis. The wastewater was at a pH of 7.0 so no adjustment was required. The sample was treated with Floccin J and the results met their requirements.

Average plant influent FOG >300 mg/l

Average plant influent TSS >2000 mg/l
