

Economy Batch Unit (EBU)

The Economy Batch Unit (EBU) is a low price alternative to other wastewater treatment systems available. Two units are available, utilizes a 50 or 100 gallon mix chamber with 1/3 hp mixer where the FloccinAgent™ is added and mixed with the wastewater, then the mixer is turned off and the drain valve is opened allowing the flocculated water to drain and dewater in the filter bag below the Mix Tank. The solids in the filter bag are allowed to drain and dry over time for easy disposal. Dewatering 50 gallons takes about 30 minutes (depends on specific water treated). Dewatering Bags can be used many times before disposal and are easily removed from the roll-away container.

Power: 120VAC - 1 Φ @ 6.2A
Dimensions are: 2'-7" x 2'-7" x 6' H
Weight: 100 lbs
