

Dry Wall Manufacturer

A Midwest manufacturer of dry wall (Gypsum wall board) products was unable to reliably treat their wastewater with conventional chemistry requiring hauling 1,000 gallons/week offsite at \$1.00/gallon. Floccin-I was used to treat the water and they are installing a batch treatment system (capital cost at \$20,000 installed) and will be treating their wastewater at less than \$0.10/gallon. Payback estimated at less than 6 months.
