

Spackling/Adhesive Manufacturer

Floccin J was used to treat these samples of spackling compound wastewater. The sample was at a neutral pH and required no pH adjustment. The Floccin-J was added at a dosage of 0.12 grams in 100 ml of wastewater. For a 1,000-gallon batch treatment, this would equate to a chemical cost of \$15.00 with excellent water clarity that could be reused in the facility.
